Annual Subject Index: 2001

- Access control
 - formal model, logic foundation for automated tools 137
- Agents
 - definition, development, framework 1
- Algorithm
 - determining worst-case message response time 31
 - distributed, performance evaluation of 214
 - divide and conquer, data-parallel formulation 303
 - information retrieval for interconnected networks 221
 - loopless, combinatorial generation, parenthesis strings 292
 - 2-median problem, two-dimensional meshes 101
 - minimization of single-faced Boolean functions 280
 - polynomial time, liveness of Petri nets
- Approximation
 - model checking non-finite-state processes, chains 109
- Boolean functions
 - single-faced functions, minimization 280
- BSP
 - communication packaging, semantic investigation 174
- Buffers
 - requirements and management, processing graph chains 486
- Caching
 - mobile objects, location scheme 340
- Checkpointing
 - data, protocols, transaction systems 92
- Clustering
 - minimizing I/O cost, matrix-based method 384
- Combinatorial generation
 - $O(1)$ time algorithms, SMCP 292
- Communication
 - packaging, BSP structure 174
 - testing of real-time systems, TIOSM formalism 435
- Concurrency
 - control, protocols for distributed object-based databases 201
 - control, requirements of workflows 42
- Conflicts
 - solving conflicts, consensus-based timestamps 398
- CORBA
 - interface description language, protocols 448
- Cryptography
 - secure protocol, multi-party key establishment 463
- Cube-connected cycles
 - layout without long wires 374
- Databases
 - distributed location, tracking mobile objects 75
 - distributed object-based, protocols for concurrency control and recovery 201
 - distributed temporal, data conflicts 398
- Data-parallel formulation
 - solving divide and conquer problems 303
- Distributed systems
 - location databases, tracking mobile objects 75
- Exception handling
 - design of software architecture 569
- Fault tolerance
 - integration into high assurance applications 544
 - routing algorithm, hypercubes 368
- Formal methods
 - framework for agent systems 1
- Framework
 - verification, properties of CCS terms 109
 - agent definition and development, formal methods 1
- Globe
 - location service, caching, lookup 340
- Grammar
 - reserved graph, specification of visual languages 186
- Graphs
 - grammar, specification of visual languages 186
 - morphic directed acyclic word graphs 425
- High assurance systems
 - safety-critical systems, use of modern processors 531
 - dependability goals, fault tolerance techniques 544
 - design of exception-handling architecture 569
 - editorial 471
 - managing latency and buffer requirements 486
 - safety-critical properties, modelling and verification 504
 - software rejuvenation schedules, estimation and analysis 473
 - network telecommunications, software reliability 557
- History of computing
 - beginnings of packet switching 152
 - introduction to D. W. Davies' paper 151
- Hypercubes
 - routing algorithm 368
- I/O cost
 - minimizing using matrix-based clustering 384
- Information retrieval
 - logical model, belief revision 410
 - search algorithm, Web 221
- Information technology
 - the industry, Turing memorial lecture 67
- Inverse problems
 - 2-D and 3-D, heat conduction, performance evaluation of algorithm 214

- Key establishment
 - secure protocol 463
- Languages
 - visual, context-sensitive graph grammar formalism 186
- Latency
 - requirements and management, processing graph chains 486
- Load balancing
 - multi-node multicast problem, wormhole 2-D torus/mesh 354
- Meshes
 - two-dimensional, 2-median problem 101
- Messages
 - synchronous, response time, FDDI networks 31
- Minimization
 - single-faced Boolean functions, OBDDs 280
- Mobile computing
 - tracking objects, distributed location databases 75
 - verification of a multicast protocol 21
 - mobile objects, location service, caching 340
- Models
 - logical, information retrieval, belief revision 410
- Multicast protocol
 - formal verification of for mobile computing 21
- Multimedia
 - streams, determining quality of service using stochastic process algebra 230
- Multi-node multicast
 - load balancing, network partitioning 354
- Multiprocessor systems
 - integrating fault tolerance mechanisms 544
- Nets
 - choice nets, synchronized, liveness 124
 - Petri nets, analysis techniques, Woflan tool, workflow processes 246
 - Petri nets, synchronized choice nets, liveness, polynomial time algorithms 124
- Networks
 - FDDI network, worst-case message response time 31
 - interconnection networks, cube-connected cycles, layout 374
 - partitioning, multi-node multicast problem, wormhole 2-D torus/mesh 354
 - search algorithm for information retrieval 221
- NP-completeness
 - precedence constrained scheduling, P-time 163
- OBDD
 - ordered binary decision diagram, structure, minimization algorithms 280
- Objects
 - databases, protocols for concurrency control and recovery 201
- Packaging
 - communication, BSP-style, semantics 174
- Packet switching
 - beginnings of, history of computing 152
- Parallelism
 - two-level, solving an inverse heat conduction problem 214
- Parallelization
 - data-parallel framework, divide and conquer algorithms 303
- Processors
 - safety critical applications, system certification 531
- Protocols
 - secure, multi-party key establishment, [†]Diffie-Hellman 463
 - interoperability, reusable components 448
- Proxies
 - placement, Web site 329
- P-time
 - precedence constrained scheduling 163
- Real-time
 - systems, testing, local computation 435
- Routing
 - algorithm, hypercubes 368
- Safety-critical systems
 - modelling and verification, state-space construction mechanism 504
 - use of modern superscalar processors 531
- Scheduling
 - software rejuvenation models, analysis of 437
 - node execution, processing graph method 486
 - precedence constrained, unit execution time 163
- Security
 - access control mechanism, real-world operating systems 137
- SMCP
 - strong minimal change property, listing combinations, canonical representation 292
- Software
 - architecture, design of for sequential and concurrent exception handling 569
 - rejuvenation, models, semi-Markov reward process 473
 - reliability, network telecommunications, fuzzy nonlinear regression 557
- Spatial joins
 - processing, minimizing I/O cost 384
- State explosion problem
 - reducing of using compositional verification methodology 504
- Stochastic process algebra
 - quality of service in multimedia systems 230
- Storage
 - compact and morphic DAWGs 425

Systems

- transaction systems, data checkpointing protocols 92
- transition systems, finite-state, labelled transition systems 109

Telecommunications

- software reliability prediction 557

Testing

- real-time systems, automatic test generation method, TIOSM 435

Time-space efficiency

- compact and morphic DAWGs 425

Turing machines

- computer virus infection 321
- computer virus infection, reply to Mäkinen 324, 326

Turing memorial lecture

- information technology industry 67

Verification

- Woflan tool, analysis of workflow process definitions 246

Viruses

- computer infection, reply to Mäkinen 324, 326
- computer infection, Turing machines 321

Web

- information retrieval, search algorithm 221
- server, placement of Web proxies 329

Woflan

- tool, workflow processes, Petri net analysis techniques 246

Workflows

- processes, management of using Woflan 246
- requirements, concurrency control 42
